

Do you want to help develop a new treatment for memory loss?

Are you
sometimes
**forgetting
things?**

Are you
between **55
and 100**
years old?

Join our innovative **Memory Research Study!**

We are looking for participants with memory problems for a double-blind placebo-controlled **clinical trial on memory for Mild Cognitive Impairment (MCI) using functional magnetic resonance imaging (fMRI) and Transcranial Magnetic Stimulation (TMS)**. Participants will receive either active or sham TMS. Those who receive sham will be eligible to also receive active treatment after the completion of the study.

You will receive financial compensation for participation in addition to parking costs. You will receive a full **Neuropsychological Assessment** and a **picture of your brain!**

For more information, please contact **the Suthana Lab**
