

# Speaker Series

## Guest Speaker

**“Genetic heterogeneity across disease trajectories in Schizophrenia”**

**Morten Dybdahl Krebs, MD,  
PhD Student**

**Institute of Biological Psychiatry, Mental  
Health Centre Sct. Hans, Roskilde,  
Denmark**

Schizophrenia is currently without any well-established clinical subclassification, but the clinical presentation is heterogenous. I will present analyses using data mining of electronic health records to identify groups of individuals with schizophrenia with shared disease trajectories and associating this with clinical and genetic risk factors. Additionally, I will present ongoing work on genetic heterogeneity across disease trajectories.

**Monday, November 4, 2019**

**11:00am – 12:00pm**

**Gonda Building 1st Floor Conference Room, 1357**

*Light snack will be provided*

Host: Dr. Noah Zaitlen
