

The Mitochondria and Metabolism Core is dedicated to providing full transparency with our full-service, turnkey solutions and protecting the confidentiality of our client's data. We will make every effort to ensure that bias is not introduced into any result presented to our clients. To achieve this, clients are entitled to all the raw data generated by the Core as well as details of the methodologies and data and statistical analysis used during Core projects. Additionally, any technical issues or removal of outliers in the data that arise during a project will be reported to and discussed with the client. A written report outlining all methodologies, data generation and data analysis will be provided to the client.

The Mitochondria and Metabolism Core acknowledges that the client has full ownership of raw and analyzed data and any information that is generated during the client's assays. We will never disclose any information with anyone except the client. The Core is committed to maintaining confidentiality of the background information provided to us by the client as well as study design, data generated during the assay, and interpretation of assay results. Additionally, we will destroy any remaining material at the end of a study and the client can request that the Core facility delete all stored data, once it has been transferred to the client.

We strive to provide our clients with the highest standards of data acquisition and analysis. Upholding the confidence of our clients through transparency and confidentiality are of the utmost importance to us. As such, we keep an open line of communication to all our past, present and future clients to answer questions, address concerns, and meet the needs of our clients.

Sincerely,
